Vetreal Sano Cattle

Supplementary Feed for Calves, Heifers and Cows

Vetreal Sano Cattle is a new supplementary feed for the natural protection of calves, heifers and cows health. The physio-logical bodily functions of animals work like a finely tuned machine. If something fails or the system is not lubricated, then the whole machine begins to splutter, i.e. in terms of animals, the risk of illnesses increases.

For the first time, V-S-Cattle offers the opportunity of natural and effective protection of health, completely chemical-free. Using this targeted supplementary feed with V-S-Cattle, the immune system of the animals is provided with all the components they need to react rapidly to illnesses. As a result, the animals are protected against unforeseen stresses and excessive susceptibility to illness.

In order to maintain health, all the body's own regulatory procedures must be maintained or re-adjusted. V-S-Cattle makes this possible with its dynamic active ingredients. The aim of supplementary feeding with V-S-Cattle is to maintain and recover the body's own biological balance – the so-called homeostasis (self-regulation).

What does Vetreal Sano Cattle contain?

V-S-Cattle is made up of inactive probiotic, prebiotic and vegetable components together with valuable natural amino acids and vitamins. Despite its low dose, this biological diversity ensures the complicated physiological machine functions flawlessly.

This diversified, dynamic multicomponent mixture meets the high demands for health and performance-oriented metabolism. The tessellated composite combination found in V-S-Cattle is far superior to the use of individual agents that was previously usual. Constant feeding with this dynamic multicomponent mixture meets today's high performance requirements. As a result, the "machine" does not begin to "splutter" when there is an unexpected production stress. Using this process of normalisation, you will save a lot of time and money.

Where does Vetreal Sano Cattle have an effect?

The most important metabolism centres such as the alimentary canal, the liver, the immune system, the nerves and cardiovascular system must be constantly "fed" with V-S-Cattle in order to ensure health. These important ingredients found in V-S-Cattle are largely missing in today's computer-controlled nutritional calculations.

Vetreal Sano Cattle closes these gaps

However, comprehensive health provision must also take into account extreme environmental factors as part of the solution to the problem. Hygiene, climate, management and other factors are part of the programme of looking after livestock as many of these environmental factors form the basis of an illness or at least account for the sensitive machine running irregularly.

Advantages gained through Vetreal Sano Cattle

– low level dosages

VETREAL SANO CATTLE

Art. 8000013

Delivery in 25 kg sacks

INGREDIENTS

Oatmeal, natural flavourings from herbs, probiotics (inactive), prebiotics

DOSE

0.2–0.4% in the complete feed
